

kaminano Board

Kaminano board is a hard board made mainly from recycled paper, which has a natural texture.

Why is it hard even though it is a recycled material?

Kaminano Board is a recycled rigid board made from high-strength rice bags and other materials.

In general, the most important key to increasing the strength of recycled hard board is whether or not it is possible to stably obtain high-strength waste paper.

The very hard rice bags used in the distribution of rice are a very suitable material for waste paper.

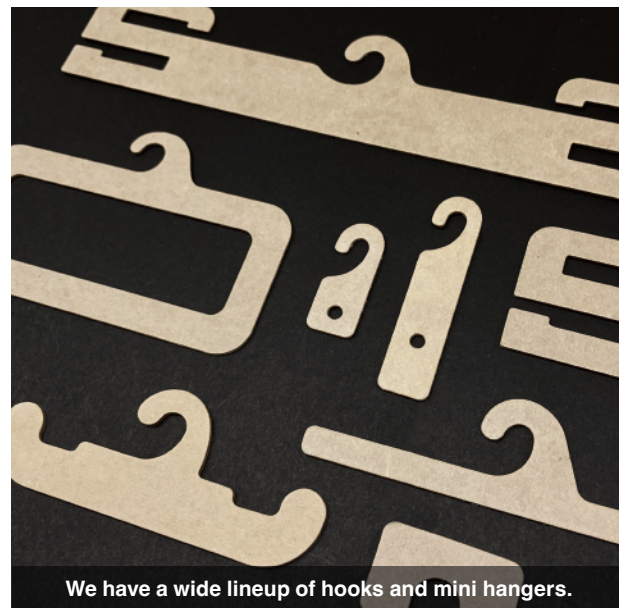

The Kaminano Board was created by securing a stable supply of rice bags through our own procurement route.

It is a product unique to a Japanese paper manufacturing company with a rice culture.

High strength in all shapes and sizes like plastic

Verification tests have confirmed that Kaminano board hooks and plastic hooks have almost the same load-bearing performance.

In addition, paper has a grain that is easy to tear, but Kaminano Board has almost no difference in grain, so it can be said that it is a suitable material for hooks and mini hangers.

TEF-01N (former of BD-12)
w27×h28.5mm

It is a paper with a very strong and gentle texture.

Natural texture unique to board paper

Kaminano Board has a natural texture unique to natural materials that is difficult to express in other Kaminano products. It has a very strong and gentle texture. Easily recognizable as a natural material from a distance and is ideal for promoting a sustainable image.

Cost competitiveness in mass production

Based on our production background bases in China and the ASEAN region, we produce units of 100 million pieces per year, so we are able to offer our products at highly competitive costs.
