## What is NFC?

NFC is a “touch-to-connect” technology that enables quick information exchange. Simply tap your smartphone or an NFC reader on the tag to open a URL, display a message, or trigger various actions. From POP displays and events to digital business cards, NFC offers endless possibilities depending on your ideas.

## How NFC Can Be Used

Guide users to special websites by placing NFC tags on posters

Embed NFC in employee IDs or business cards to create digital business cards

Integrate NFC into apparel tags to share brand stories or care instructions

Replace QR codes for event reception or attendee check-in

## Simple NFC Setup

1. Prepare a rewritable NFC tag and an NFC-enabled smartphone, then install a dedicated NFC app.

2. Open the app and enter the information you want to write.

3. Tap your smartphone on the NFC tag to transfer the data.

4. Confirm that the written information works correctly.

## Want to Learn More About NFC?

If you have questions about NFC solutions or implementation, feel free to contact us.

Tentac’s RFID Division provides proposals tailored to your needs and can support ideas such as “Can we use NFC for this?”

Whether you’re new to NFC or considering business integration, we’re here to help.
